Table 1: TEST. accuracies and standard deviation on the SMCALFLOW-CS Compositional Skills dataset w.r.t. the size of compositional examples included in the training set. We report both the results on the in-domain single-skill examples (S) as well as the generalized multi-skill examples (C). Results averaged over five random random seeds. **Bold** results have p -values ≤ 0.01 when comparing to other systems in the same category using paired permutation test.

Table 4: Accuracies and standard deviation on the ATIS text-to-SQL standard i.i.d. split. Results averaged over five random runs.

Here we present updated experiment results with standard deviation. For SMCALFLOW-CS and CFQ, we run with more (five) random seeds (three was used in the original submission). On CFQ, we follow Furrer et al. (2020) and report 95% confidence intervals.
